

Muck Pellets & Muck Pellets PLUS

REDUCE BOTTOM SLUDGE & IMPROVE MURKY WATER

Pond Pro Muck Pellets and Muck Pellets PLUS are a premium Canadian-made bioremediation product containing 5 species of bacteria designed to reduce and prevent sludge buildup. This formula is made as an easy to apply, professional grade tablet.

Muck Pellets & Muck Pellets PLUS improve pond health by introducing beneficial bacteria. These pellets sink to the bottom and settle in the sludge, where their bacteria and enzymes break down the organic matter. Optimal results are achieved with proper aeration and water movement, which facilitates bacteria multiplication.

Benefits

- Breaks down sludge & muck
- Clarifies water by reducing murkiness & turbidity
- Removes nutrients & sediments
- Breaks down organics

Applications

- Ponds
- Lakes
- Dugouts
- Fish & koi ponds
- Sewage lagoons
- Stormwater retention ponds
- Drinking water reservoirs

Product Features

- Easy to apply, small pellet
- Odour free
- Free of harsh chemicals
- Can be used safely around fish, plants, birds, swimming ponds, & other wildlife when used according to label directions
- Higher concentration than similar products
- 5 species formula
- Available in 2.5 kg, 5 kg or 12.5 kg boxes
- Contains sludge eating bacteria, enzymes & minerals

Muck Pellets & Muck Pellets PLUS

REDUCE BOTTOM SLUDGE & IMPROVE MURKY WATER

Muck or Muck PLUS, which one is right for you?

Our Muck Pellet original formula is sufficient for most ponds. We created our extra strength Muck Pellets PLUS formula to give our original formula an extra kick! Muck Pellets PLUS contains more than double the bacteria concentration compared to our original formula. Muck Pellets PLUS is recommended for problem ponds/lakes, or if you want to keep your pond or lake at its best!

Muck: 2 billion bacteria concentration

Muck PLUS: 5 billion bacteria concentration

Application Instructions

Muck Pellets and Muck Pellets PLUS are best applied at the beginning of the season. This should be done once the pond or lake is completely free of ice, with a heavy treatment to kick start the process. To maintain the condition of the pond or lake, you should apply maintenance applications every two to four weeks. This should continue for as long as the pond or lake remains completely ice-free. Applying the pellets is easy; simply toss them into the pond or lake to ensure an even distribution across the surface area.

It is important to note that if your pond has a history of being difficult to manage or grows excessive vegetation, you may need to treat it with higher application rates. Higher application rates can be used safely around fish, plants, birds, swimming ponds, and other wildlife when used according to label directions.

Application Rates

AREA	FIRST TREATMENT	MAINTENANCE TREATMENTS (Every 4 weeks)	EUTROPHIC OR PROBLEM PONDS (Every 2 weeks)
SMALL PONDS 10' x 10'	1 HANDFUL ≈ 10 TABLETS	5 TABLETS	5 TABLETS
1000 M ² ≈ ¼ ACRE	2.5 KG	1 KG	1 KG
2000 M ² ≈ ½ ACRE	5 KG	2 KG	2 KG
4000 M ² ≈ 1 ACRE	12.5 KG	5 KG	5 KG
10,000 M ² ≈ 2.5 ACRES	25 KG	10 KG	10 KG

For eutrophic or problem ponds, or for best results: use Muck Pellets PLUS at the treatment rates above.
